

Presentation Script — SmartLife & Budget Balance Platform

English for Business Presentations · Live Presentation with Q&A
Target length: under 6 minutes (~480 words, 5 parts, Q&A as the closing invitation)

Part 1: Opening & Introduction

~1–1.1 min

Content covers:

Greeting, self-introduction, project name, purpose, and why the topic matters.

Slide cue (not spoken): Slide 1 (Title) — stay here

Your Script:

“Good morning everyone. Thank you for being here today. My name is Narongchai Thathong, and these are my teammates, Konpong Chaovanakittikun and Natkamol Petcharat. Today, I would like to present our project, SmartLife and Budget Balance Platform, or SmartLife for short. The purpose of this talk is to show you how SmartLife helps university students manage their daily schedule and their money, all in one single app. This topic is important because right now, we use many separate apps just to get through a normal day — one for classes, one for notes, and one for tracking money — and switching between them wastes time that should go into studying instead.”

Part 2: Structure & Housekeeping

~1 min

Content covers:

Presentation outline, time limit, and when questions will be taken.

Slide cue (not spoken): Slide 1 (Title) — no change yet

Your Script:

“I have divided my presentation into three parts. First, I will talk about the problems students face with their time and money. Next, I will show you the core features of SmartLife and how they solve these problems. Finally, I will summarize the benefits and close. This presentation takes about five minutes, and I will be happy to answer any questions at the end. Please don't worry about taking notes — everything I show you today is captured directly from our real app, built with Expo, React Native, and a live Firebase database, not a mockup, and not just a design idea.”

Part 3: Main Point 1 — Current Problems

~1–1.1 min

Content covers:

Introducing the pain point: too many separate apps, wasted time, burnout risk, and giving up on budgeting.

Slide cue (not spoken): → Slide 2 (Problem) as you start this part

Your Script:

“Let's start with the problem. As students, we deal with class schedules, deadlines, exams, and a limited budget, all at the same time. With no single tool for this, we end up using several different apps, which wastes time we could spend studying or resting. Normal planning also doesn't check how tired or stressed we are, so students risk burnout without noticing. And logging every expense by hand takes so much effort that most of us simply stop budgeting after a few weeks. SmartLife was built to solve all of these problems in one app.”

Part 4: Main Point 2 — Core Features

~1–1.1 min

Content covers:

A quick walkthrough of the four core features and how each one solves the problem above.

Slide cue (not spoken): → 3 (Solution overview) to open · → 4–5 at “Unified Dashboard” · → 6–7 at “Smart Schedule Importer” · → 8–10 at “Smart Schedule Builder” · → 11–12 at “Personal Finance Tracker”

Your Script:

“Now for the solution. SmartLife has four core features. First, the Unified Dashboard shows your schedule, budget, and an AI assistant on one screen, answering questions instantly using real data. Second, the Smart Schedule Importer reads a photo of your timetable and adds it to your calendar automatically. Third, the Smart Schedule Builder learns your habits, suggests better study times, and flags it if your balance looks off. Finally, the Personal Finance Tracker scans your receipts, sorts each expense automatically, and warns you when you go over budget. Together, these four features work as one system.”

Part 5: Conclusion & Q&A

~0.9–1 min

Content covers:

Summarizing the main points, restating why the project matters, closing, and inviting questions.

Slide cue (not spoken): → 13 (Benefits) at “To sum up” · → 14 at “Suranaree University” · → 15 at “Thank you”

Your Script:

“Well, this brings me to the end of my presentation. To sum up, SmartLife replaces many separate apps with one smart, simple platform — saving students time and building healthier habits for both time and money. It's built specifically for students at Suranaree University of Technology, to solve a problem we face ourselves, every single day. Thank you very much for your time and attention. If you have any questions, I'd be happy to answer them now.”

Bonus Prep (not part of your 5-part timed script)

Part 5 above already ends with the invitation — “If you have any questions, I'd be happy to answer them now.” Everyone in the audience then asks their own real questions, so the exchange itself can't be scripted. What you can prepare is the content of your answers. With only about 3 minutes for the whole Q&A, each answer below is kept to one short, memorable line — learn the idea, not the exact words.

Q: What makes SmartLife better than popular apps like Notion or Google Calendar?

A: Notion and Calendar need a lot of manual setup. SmartLife automates it — schedule, budget, and AI, all in one app made for students.

Q: What technology did you use to build SmartLife?

A: We built it with Expo, React Native, and a live Firebase database — so everything you saw today is real, not a mockup.

Q: How does SmartLife keep users' financial data safe?

A: Firebase authentication keeps each user's data private, so only the logged-in user can see their own schedule and finances.

Q: How does SmartLife make daily life more convenient for users?

A: Everything — your schedule, your budget, and AI help — lives in one app, so you don't have to juggle five different apps every day.

Q: You mentioned the Smart Schedule Builder learns from our habits to prevent burnout. How exactly does it learn?

A: It tracks your study and rest patterns over time, then uses AI to suggest better times and flag when your balance looks off.

Quick-Reference: Handling Live Questions

Also not part of your timed script — keep this as a backup for handling whatever actually comes up. Phrases adapted from the Week 3 “Managing Questions” lecture.

Situation	Phrase to use
If you didn't hear it	Sorry, I missed that. Could you say that again, please?
If the question is unclear	Sorry, I don't quite follow you. Could you run through that again, please?
Checking you understood	If I understand you correctly, you'd like to know whether...
If you don't know the answer	I'm afraid that's outside what I can confirm right now, but I can follow up with you after class.
If time is running out	I'm afraid we're running out of time — may I take one last question?
After you answer	Does that answer your question?
Closing the Q&A	If there are no more questions, thank you very much for your time and attention.

Delivery note: your full run-through of the previous version (about 555 words) took 6 minutes 30 seconds, which works out to roughly 85 words per minute in an actual delivery — slower than a plain read-aloud pace, because a real presentation includes pauses, slide changes, and thinking time. Parts 1 and 2 are unchanged since you already have them memorized. Parts 3, 4, and 5 have been trimmed, so Parts 1–5 now total about 480 words, which comes to roughly 5.6 minutes at that same 85 words-per-minute pace — under the 6-minute limit, with about 20 seconds of buffer in case you pause or blank for a moment. The “Bonus Prep” page and the phrase toolkit are still not counted in this timing.
